

Smart Electric Safety Supervision And Power Management System

MTS3

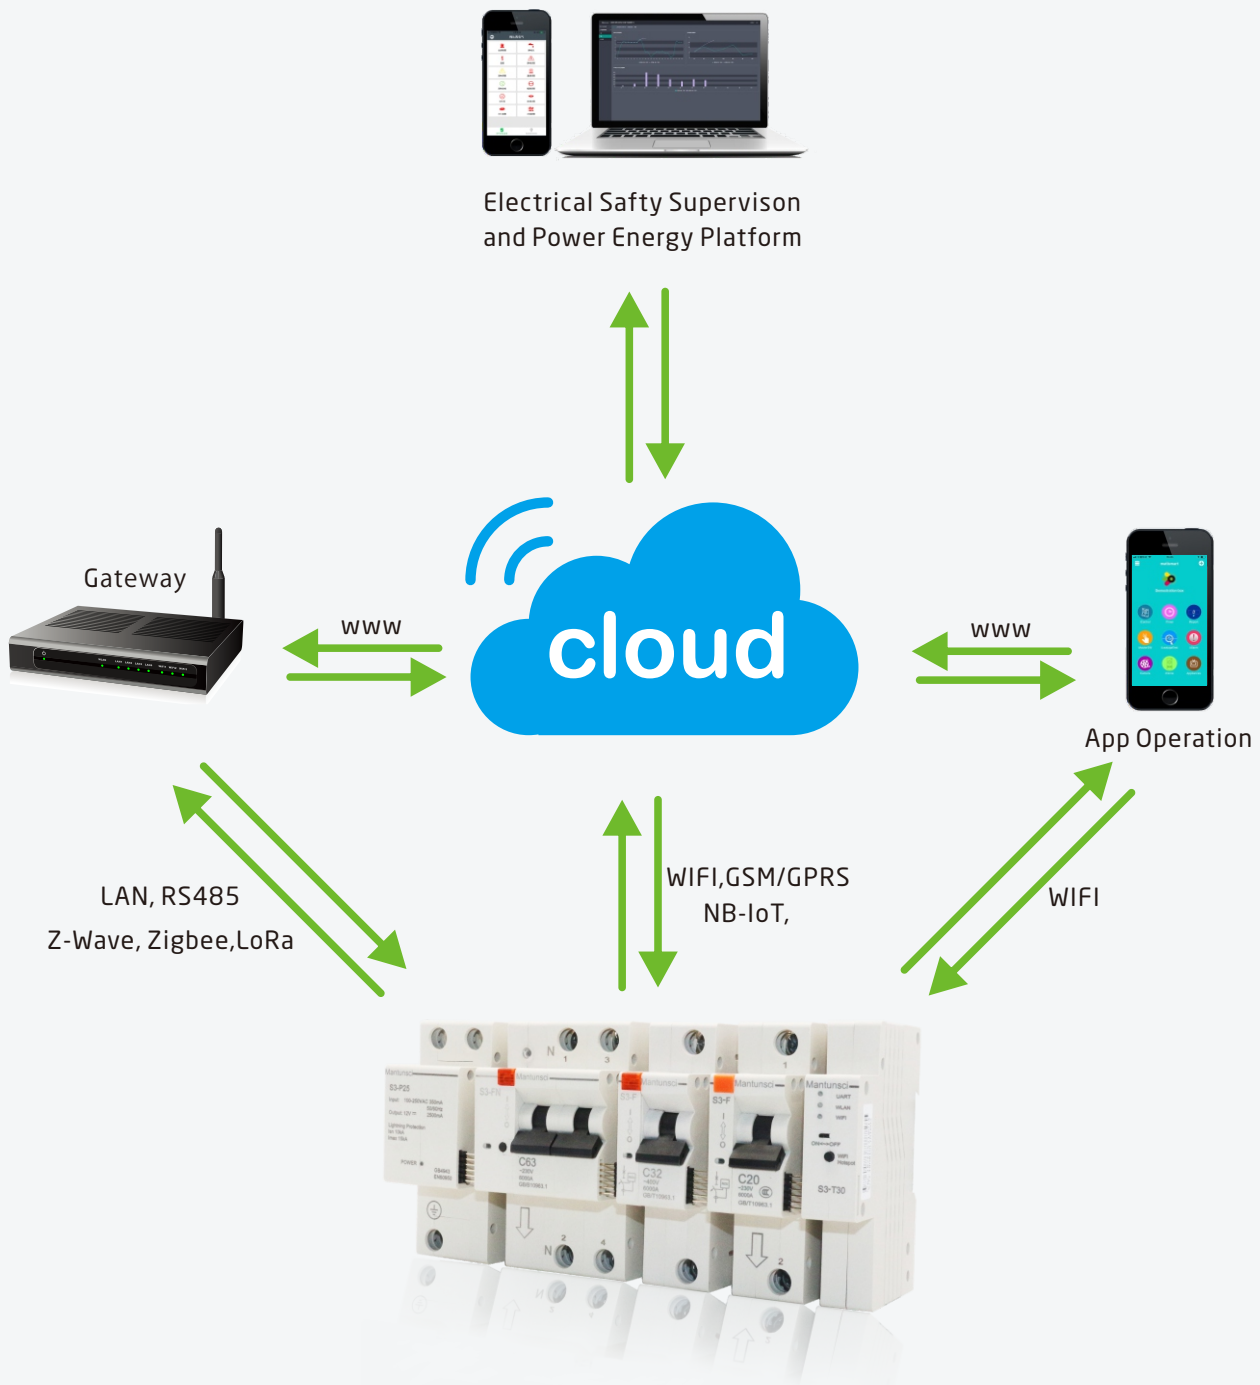

Focus on Smart Electricity

Smart Electric Safety Supervision and Power Management System

Overview

MTS3 is a smart electric safety supervision and power Management system that includes both hardware and software, which integrates the most latest & advanced technologies like AI, Big data, IoT and cloud computing.

The system raises a pre-alarm before reporting a failure. This device has features like Online power management, real-time power efficiency monitoring, real-time monitoring of electrical circuit parameter (voltage, current, power KWH, etc), and are reported, which help identify where energy savings are required, and further save power bills through analysis of collected data, power consumption analysis.

Structure

Smart Electric Safety Supervision and Power Management System

Hardware Introduction

Power supply module with surge protection

- Provides DC power for smart circuit breaker and communication module.
- Provides lightning & surge protection.
- Main technical parameters:
Input voltage: 100-250 V AC
Input current: 3.5 A
Output voltage: 12 VDC
Imax for lightning protection: 15 kA
- Working with max.10pcs iRCBO or iMCB

Smart Metering Breaker - iMCB

- Full protection :
Overload, Short circuit, Over/under voltage
Arcing fault, Phase loss, Unbalance, High temperature
- Main technical parameter:
Poles: 1P, 2P, 3P, 4P
Rated Current (A): 10, 16, 20, 25, 32, 40, 50, 63, 80
Breaking Capacity: 6000 A
Curve: B, C, D

Smart metering breaker - iRCBO

- Full protection :
Identifies Earth leakage, Overload, Short circuit, Over/under voltage,
- Arcing fault, Phase loss, Unbalance, High temperature
Main technical parameter:
Poles: 2P, 4P
Rated Current (A): 10, 16, 20, 25, 32, 40, 50, 63, 80
Rated Residual Current: 30 mA
Curve: C

Communication module

- Voltage: 12VDC
- Communication Modes:
WiFi, LAN, RS485, NB-IoT, GSM/GPRS, Zigbee, LoRa
- Protocol: UDP, TCP/IP, Modbus
- Working with max.24pcs iRCBO or iMCB

Connection pin

Connection is extremely simple and requires no special tools, all the modules in one row can be connected by connection pins

Flexible flat cable

Flexible flat cable is used for connection of multi-rows in power cabinet.

Features

Device extendable

This is a modular device which can be extendable as traditional MCB and RCBO. It withstands maximum current up to 80A. 1,2,3 & 4Pole for iMCB are available.

Minimum space requirement

Except for Power supply module of 36mm and Communication module of 18mm, the iMCB and iRCBO have an extra 9mm or 18mm control module, different from traditional MCB and RCBO.

Very simple installation

All devices are mounted in 35mm Din Rail and connected by connection pins or flexible flat cable. No special tools are required for the entire connection process.

System compatibility

This system can be compatible with other systems, such as smart home, fire monitoring system, energy efficiency management system, smoke and voice control etc..

Electrical faults analysis

The system can realize real-time analysis of all electrical faults of both main and branch lines: short circuit, earth leakage, overload, over/under voltage, overheated, arc fault, etc..

Monitor of electrical circuit parameter

The system can realize real-time monitoring of electrical circuit parameters: voltage, current, power, temperature, residual current and KWH.

Full protection

This system includes all protections: overload, short circuit, earth leakage, surge, over/under voltage, arcing fault, phase loss, unbalance, high temperature

Max. power and current setting

The power and current under rated current and power can be adjustable through the App or software platform

Auto-test of earth leakage current

The device periodically tests the working of the residual current circuit protection, which can be set on fixed dated each month in the APP, rather than traditional test monthly on site.

Anti-fraud of electricity

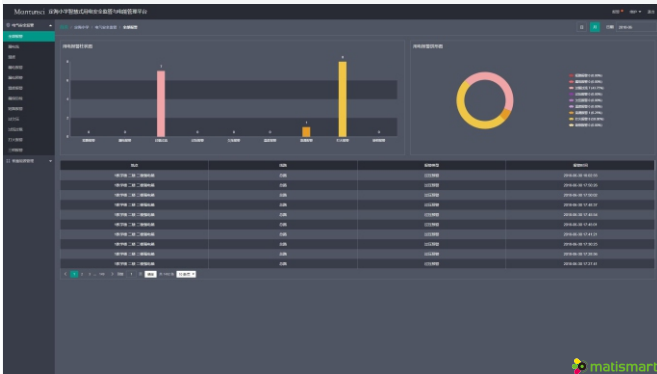

Smart Electric Safety Supervision and Power Management System

Benefits

Early warning system and alarm (Pre-alarm Maintenance)

Continuous monitoring of electrical parameters of each breaker including both main and branch lines (such as current, voltage, earth leakage current, power and temperature) makes it possible to detect the early electrical faults and make early-warning before any unforeseen event. It improves the safety and reliability and electrical system and may be used widely in building as fire system solution.

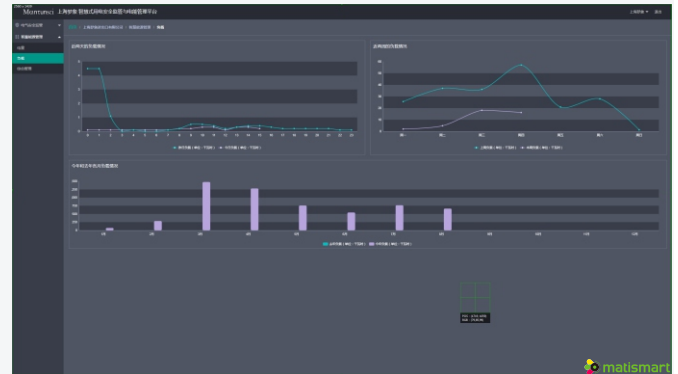

Remote control

The hardware device may be controlled by App and software anytime and anywhere, to make life easier and safer.

Power management and cost analysis to reduce and schedule energy costs.

The cost of energy will rise continuously. In order to cut costs, we first have to identify where they occur. The smart power management system helps illustrate and analyze the instantaneous energy consumption levels and realize the real-time power efficiency monitoring. Furthermore, the calculated active energy can be used to roughly allocate the costs at the output level. Therefore, it helps identify energy saving, and further to save energy cost, through analysis of collected data and power consumption.

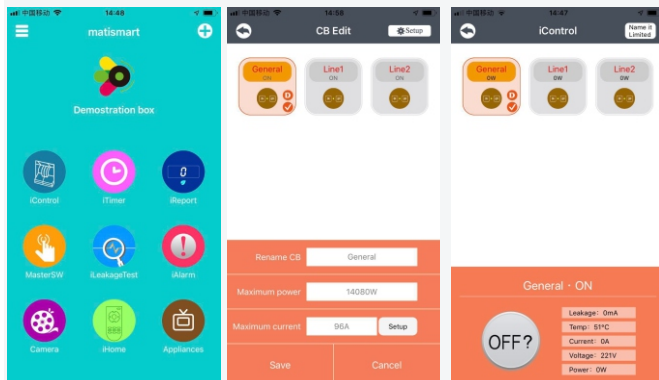

Software Introduction

The Matismart smart electric safety supervision and power management system is an innovative cloud-computing platform designed to monitor, optimize and control the electrical system. This system also provides access to multi-site level, simultaneously monitoring and comparing the performance of different of different facilities. It also can provide personal user profiles depending on the level of access they require. It mainly include App operation version in smart phone and software platform for Electric safety supervision and power management.

APP (Android/IoS)

It includes six functions:

Remote control, Real-time monitoring, Event alarm and push, Power consumption curve, Timer, Max. Power and Current setting, auto-test of Residual Current.

Remote control

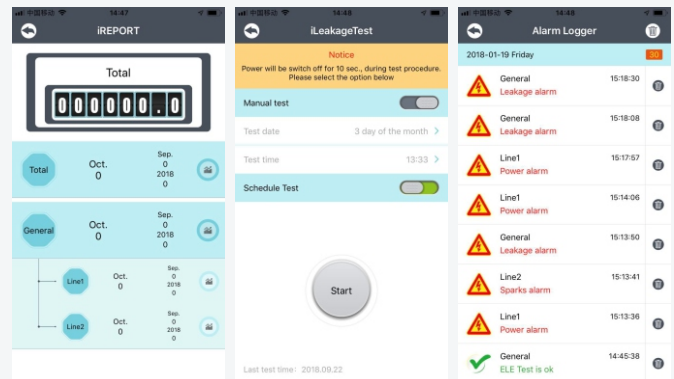

iMCB and iRCBO can be operated individually or be switched on/off all together through App remotely. And for safety, it can not be switch on through APP after switching off manually.

Real-time monitoring

The system monitors electrical circuit parameters : voltage, current, Power ,temperature, Residual Current and KWH and these parameters may be showed in APP.

Max. Power and current setting

The max. power and current may be set through APP and the seting value must lower than rated current and power.

Power consumption

Power concumption curve of main lines and each sub-lines may be showed in APP monthly and hourly.

Event alarm and push

All the events recorded and fault alarm will be pushed through App.

Auto-test of residual current

Auto-test of earth leakage current in fixed date each month in the App instead of manual test monthly

Timer

Users are able to remotely set the power demand they want to target with a weekly,daily or hourly resolution

Smart Electric Safety Supervision and Power Management System

Software Platform

The software platform includes two main parts: electrical safety supervision and power management.

Electrical Safety Supervision

The system will monitor all the electrical circuit parameter of all main and branch lines in real-time such as voltage, current, Power ,temperature, residual current and KWH and it may do pre-judgement and action through these electrical data collection and analysis.

Device location monitoring

After installation, the location information of each device will be recorded and showed in the map in software platform. The software platform will monitor the real-time status of all device installed all over the world, in case early warning or fault alarm raised, the supervisor can identify the device and its location quickly, then resolve the problem accordingly before any unforeseen event.

Information management

Through software platform, you can easily view contact information of technician of each project management site. In case of any warning/alarm raised, the software platform sends an alert to the contact person so that he deals with it immediately.

Early warning and alarms

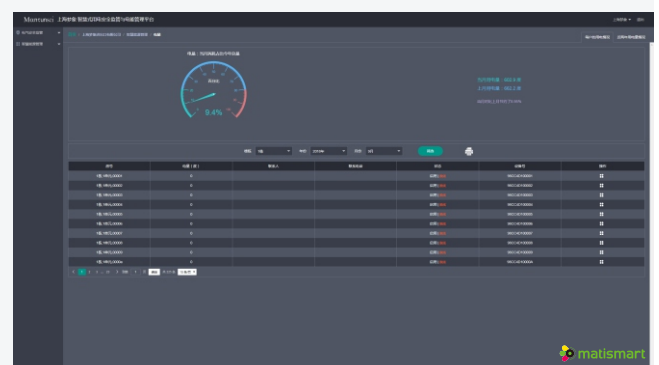

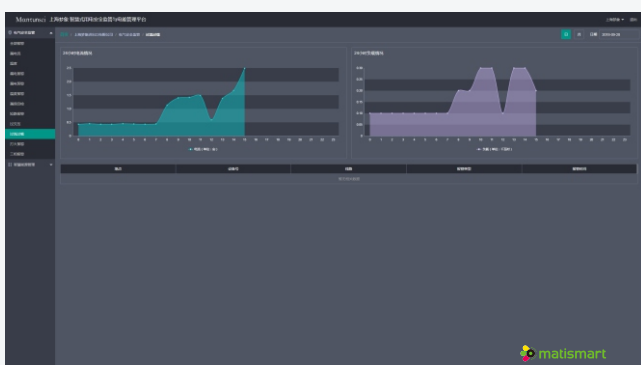

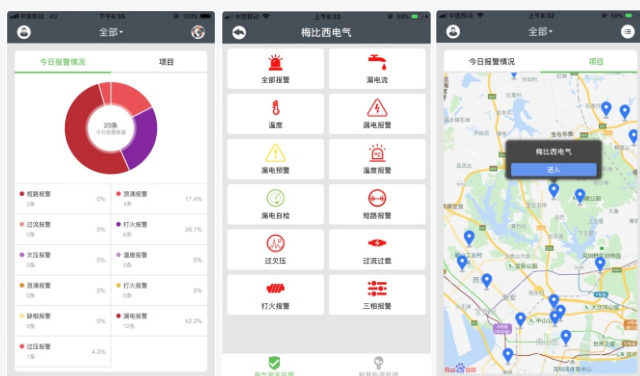

Early warning and alarm information in software platform can be read /understood as follows:

- > Alarm of earth leakage current
- > Early warning of earth leakage current
- > Early warning of high temperature
- > Autotest function of earth leakage protection
- > Early warning and alarm of overload and over current
- > Early warning and alarm of over voltage and undervoltage
- > Alarm of short circuit
- > Alarm of unbalance
- > Alarm of electricity fraud

Electrical parameter monitoring

Electrical parameter monitoring in software platform can be read/understood as follows:

- > Temperature monitoring
- > Current monitoring
- > Voltage monitoring
- > Power monitoring
- > Earth Leakage current monitoring

Software Platform

Power Management

In this software platform, the user will find the basic analytic functions such as a dashboard data, instantaneous values, comparison functions and cost allocation by consumer group.

The building energy flows and costs are transparent, therefore, this solution is suitable for energy management and energy cost allocation application seeking energy efficiency improvement and cost reductions.

The platform realizes the collection, storage, management and efficient use of the terminal energy information. It analyzes, processes, handles all energy data, and output to keep the system run in best state, after system intelligent configuration.

In order to further provide conditions for mining, analyzing, processing and handling energy data, The energy efficiency management system we built, can not only effectively solve real-time energy balance and monitoring management, but also build up condition to further dig, analyze, process, handle data, through filing and management of a large amount of historical data.

Power consumption statistic, analysis and comparison

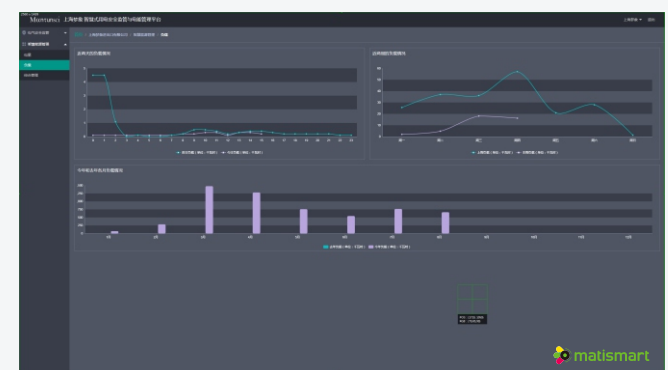

- > Power consumption comparison between current month and last month
- > Power consumption percentage of current month in the total amount of the whole year.
- > Power consumption statistic and sum of each classified divisions
- > Power consumption comparison monthly in last two years

Load statistic and comparison

- > Load status and comparison of today and yesterday
- > Load status and comparison of this week and last week
- > Load status and comparison of this year and last year

Control and Management

- > Rename of each device
- > Remote control
- > Scene setting with timer function
- > Password management

Smart Electric Safety Supervision and Power Management System

Applications

The device is based on a simple, integrated architecture. It guarantees high levels of flexibility, making it suitable for applications in different sectors.

In the industrial sector, solutions can be installed in small to mid-sized plants, in infrastructure facilities and process plants to monitor operations, using data analysis to minimize downtime.

Optimized management of assets creates a competitive advantage that enables customers to maximize business opportunities.

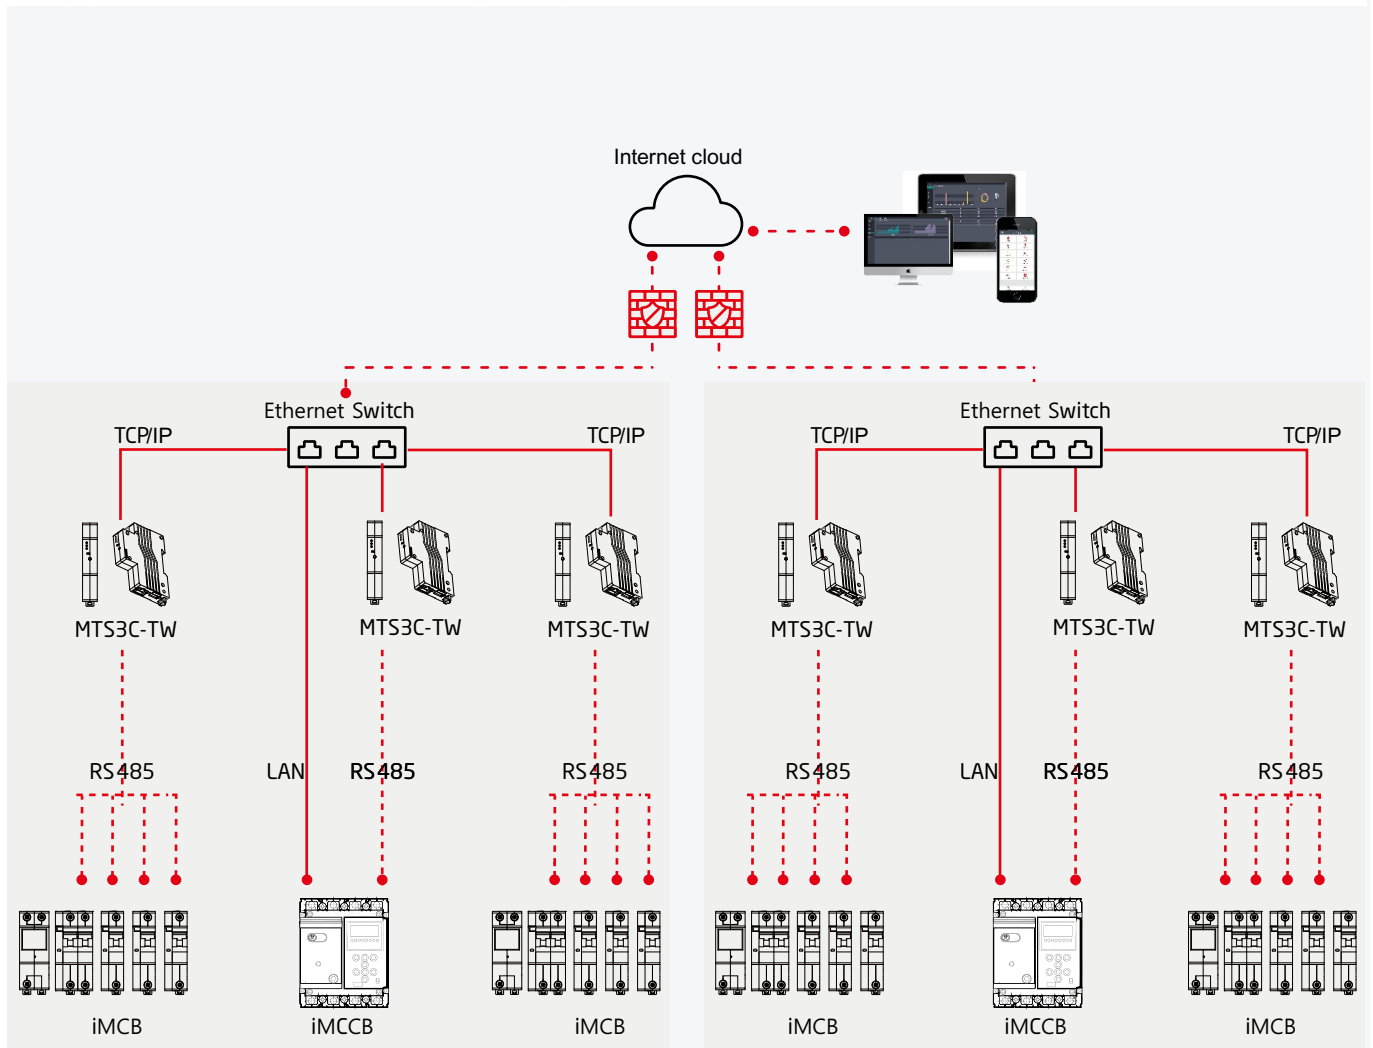

Commercial and public buildings can also leverage the scalable solution to achieve higher energy efficiency and to have more detailed monitoring and control of their facility. Offices, shopping malls, hotels, retail or chain stores can increase their awareness of energy consumption and cost allocation to improve performance.

Public facilities, such as schools, sport centers and healthcare facilities, can secure service continuity and develop predictive maintenance forecasts.

Application Examples

SHANGHAI ELECTRIC POWER INDUSTRY SCHOOL

Smart Electric Safety Supervision and Power Management System

Application Examples

HOTEL

Application Examples

This smart electrical safety supervision and power management system has changed the traditional operation and maintenance mode. By establishing an automatic monitoring and management platform, it is easier to use electrical safety supervision to eliminate potential safety hazards and achieve scientific energy management.

Shenzhen People's Hospital

The "Smart Electricity" APP helps hospitals to realize terminal power collection, store large amounts of data in real time, acquire first-hand data in real time, develop data center to extract, dig, analyze and summarize data, and finally provide proof for important decisions.

Dazhou Shopping Mall

The mobile operation APP, with big data system, can digitally visualize all shop's power consumption, to graphically show and monitor the electrical operation.

Beijing Normal University Experimental Primary School

The "Smart Electricity" system can realize 7×24-hour school monitoring, get out of the limit and low efficiency of human work, and monitor the device operation status in real time through IoT system.

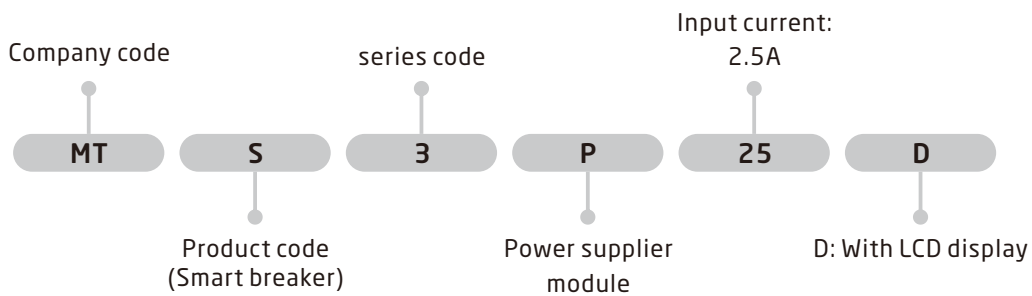

Changsha Bank

To realize the smart electrical management in bank, the system will activate alarm in time while there are potential hazard, such as abnormal lines or overload circuit. It will accurately report the fault cause, and timely check the safety hazards through technical means.

Smart Electric Safety Supervision and Power Management System

Magnetic Release Characteristics for iMCB

An electromagnet with plunger ensures instantaneous tripping in case of short circuit. The IEC60898 distinguishes three different types: B, C, D

Standard	Curve	Start Status	Test current	Test Request	Tripping time	Applications	Ambient Temperature for Test
IEC60898	B	Cold	3In	No trip	$t \leq 0.1s$	Only for resistive loads such as: Electrical heating water heating stoves	30°C
		Cold	5In	Trip	$t < 0.1s$		
	C	Cold	5In	No trip	$t \leq 0.1s$	Usual loads such as: Lighting Socket outlets small motor	
		Cold	10In	Trip	$t < 0.1s$		
	D	Cold	10In	No trip	$t \leq 0.1s$	Control and protection of circuits having important transient inrush currents(large motors)	
		Cold	14In	Trip	$t < 0.1s$		

Thermal Release Characteristics for iMCB

The release is activated by a MCU unit in case of overload, the standard defines the range of release for specific overload value

Reference ambient temperature is 30°C

Standard	Start Status	Test current	Test Request	Tripping time	Ambient Temp
IEC60898	Cold	1.13In	No Trip	$T \geq 1h (In \leq 63A)$	30°C
				$T \geq 2h (In > 63A)$	
	Hot	1.45In	Trip	$T < 1h (In \leq 63A)$	
				$T < 2h (In > 63A)$	
	Cold	2.55In	Trip	$1s < t < 60s (In \leq 32A)$	
				$1s < t < 120s (In > 32A)$	

Detectable WaveForm for iRCBO

- Type AC : For which tripping is ensured for residual sinusoidal alternating currents, whether suddenly applied or slowly rising.
- Type A : For which tripping is ensured for residual sinusoidal alternating currents and residual pulsating direct currents, whether suddenly applied or slowly rising.

Tripping Senitivity for iRCBO

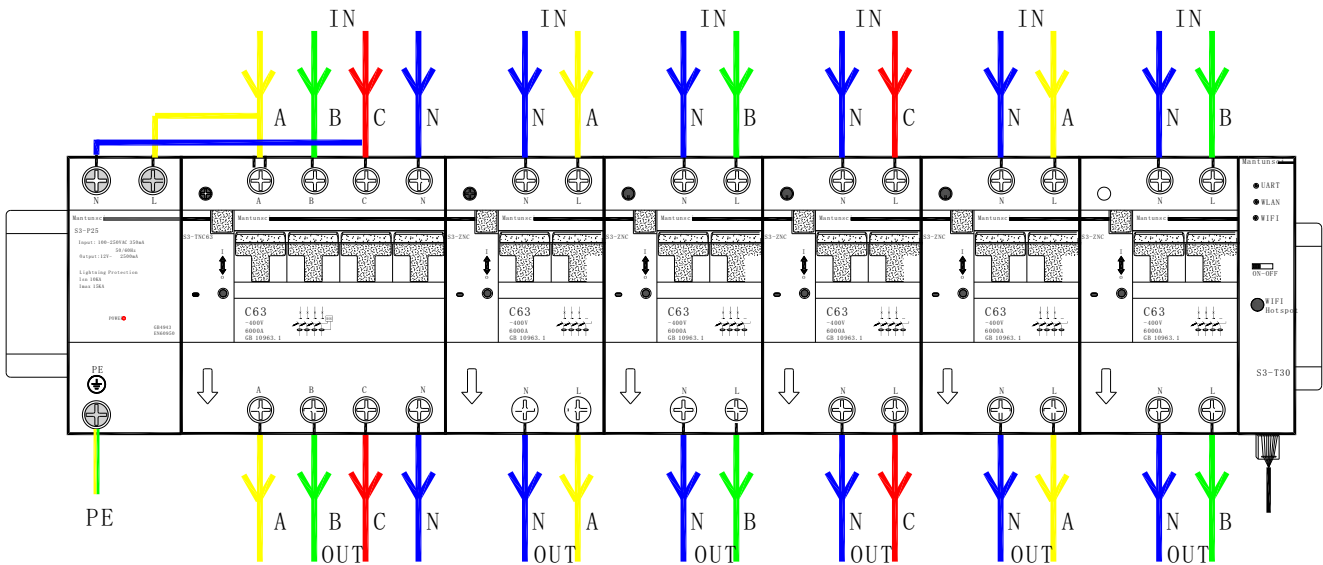

- 30mA- additional protection against direct contact.
- 100mA- Co-ordinated with the earth system according to the formula $< 50/R$, to provide protection against indirect contacts.
- 300mA- Protection against indirect contact, as well as fire hazard

Installation and Wiring Diagram

Combined installation and wiring shown according to the illustrated module as below:

- Power supply module is mandatory module, and installed in first place of the row. It can drive max.10pcs iMCB / iRCBO.
- 1pc iRCBO / iMCB(2,3,4 poles) used as main switch, and follows to the power supply in second place.
- Required quantity of iMCB / iRCBO to be installed as branch switches, followed the main switch.
- Communication module is also a mandatory module, and installed in last place of the row. It can drive max.32pcs iMCB / iRCBO.
- All modules are connected by connection pins in each row, and a flexible flat cable is needed to connect multi rows.

Screw size	Rated torque	Ultimate torque	National standard	Hard line	Cord or hoop terminal
1~25	2.5 Nm	5.1 Nm	2.0 Nm	1-25mm ²	1-16mm ²
32~80	3.5 Nm	5.6 Nm	3.5 Nm	1-35mm ²	1-25mm ²
